Why Is Track IT Necessary?

This platform addresses critical challenges faced by students and fresh graduates for three main reasons:

- Applicant Tracking Systems (ATS) reject many qualified candidates before human review, creating an invisible barrier to employment that students need help overcoming.
- Students often lack awareness of their actual standing in the job market, making it difficult to focus their professional development efforts effectively.
- There is a significant gap between academic education and practical job market requirements, with few tools available that provide personalized guidance based on individual skill levels.

How Will We Implement Track IT?

We will develop the platform using the MERN stack (MongoDB, Express.js, React.js, and Node.js) to ensure scalability and modern user experience. The implementation process will involve several key phases:

- First, we'll create the AI-powered CV analysis system that can extract skills, evaluate them against industry standards, and assign appropriate skill level classifications (weak, intermediate, or strong).
- Next, we'll develop the recommendation engine that connects users with personalized resources - suggesting learning paths for weak skills, internship opportunities for intermediate skills, and job listings for strong skills.
- Finally, we'll build a user-friendly interface that guides students through uploading their CVs, receiving detailed ATS scoring feedback, and accessing their personalized recommendations in a clear, actionable format.

Throughout development, we'll conduct regular testing with actual students to ensure the platform effectively addresses

Survey Questions :

1-Name:

Enter your answer

2.What is your current role?

ما هو دورك الحالي؟

- Student
- Teacher
- Career switcher
- Unemployed/seeking work
- graduate
- Other

3.What is your main goal when using online learning platforms? ما هو هدفك الرئيسي من استخدام منصات التعلم عبر الإنترنت؟

- Learn job-ready skills
- Prepare for certification
- Switch careers
- Stay updated in my field
- Explore new topics for fun
- Other

4.How often do you engage in online learning?

- Daily
- Weekly
- Never
- Other

5.Which devices do you primarily use for learning online?

- Laptop
- Tablet
- Desktop
- Smartphone
- Other

6.What helps you finish a course

الذي يساعدك في إنهاء دورة تدريبية؟

- It helps me in my career
- It's fun or interactive
- I get a certificate
- I earn points or badges
- I can talk with other learners
- Other

7.What features do you want in a new platform? (Pick up to 3) ما هي الميزات التي ترغب بها في المنصة الجديدة؟

Please select 3 options.

- Personal learning path
- Practice coding or real tasks
- Smart course suggestions
- Help from mentors
- Help to find jobs/internships
- Other

8.What kind of content do you like?

ما نوع المحتوى الذي يعجبك؟

- Video lessons
- Quizzes and questions
- Live classes
- Downloadable notes
- Projects or case studies
- Other

9.Would you use AI tools to help you learn?

- Yes
- No
- Maybe
- Other

10.Which payment style do you like best?

- Monthly payment
- Pay once for a course
- Free with some paid parts
- Free only
- Other

11.What problems do you have with online platforms? ما هي مشاكلك مع المنصات الإلكترونية؟

- Too hard to follow
- Boring content
- Bad design or slow

- Expensive
- No help or feedback
- Other

12.What are your worries about using AI in learning? ما هي مخاوفك بشأن استخدام الذكاء الاصطناعي في التعلم؟

Please select 2 options.

- Privacy and my data
- Wrong or bad suggestions
- Too much automation
- I don't worry about AI
- Other

Feedback & Ideas

13.What would make you switch to a new platform like TrackIT?

- Better career help
- More practice and real learning
- More personal experience
- Lower price
- Something new and useful

14.Would you try TrackIT if it meets your needs?

- Yes
- No
- Maybe

15. What is one thing you want most in a learning platform? ما هو أكثر ما ترغب به في منصة تعليمية؟

- Job matching
- Mentorship
- Track my progress
- Real projects

How We Calculated Required Responses?

For the Track IT project, we determined the necessary sample size by using the [smart survey](#) calculator tool to ensure statistical validity in our research. We carefully considered the following parameters: You Can Check the Responses From [ExcelSheet](#)

Calculate your sample size

N – Population Size •

z – Confidence Level •

e – Margin of error (%) •

- **Population Size:** We identified approximately 21.9 million adults (18+) in Egypt as our target population, as this represents individuals eligible to enter the job market. This figure was based on the most recent demographic data available.

- **Confidence Level:** We set the confidence level at 95%, meaning if we conducted the survey 100 times, approximately 95 of those iterations would produce results within our specified margin of error. This confidence level is widely accepted as the standard for statistical research.

- **Response Rate:** We established a 90% expected response rate, accounting for the possibility that some participants might provide random or inaccurate answers to our questions. This helped us compensate for potential data quality issues.

- **Margin of Error:** We selected a 5% margin of error to account for potential inaccuracies in our population data, as the most recent comprehensive population census in Egypt is conducted only once every ten years.

After inputting these parameters into the calculator, it determined that we needed 207 responses to achieve statistically valid results. We then distributed our survey through academic channels, reaching out to university students, recent graduates, faculty members, and professionals in the field to gather the required data.

Through our distribution efforts, we successfully collected 206 responses, achieving 99.5% of our target sample size, which provides us with statistically significant data to inform the development of the Track IT platform.

Demographic Role Breakdown: Reveals the vast majority of respondents are students (142), with small numbers of graduates (10), job seekers (7), career switchers (6), and

teachers (5). This indicates the platform primarily serves an academic audience.

2. What is your current role?

ما هو

[More details](#)

دورك الحالي؟

Learning Goals Analysis: Shows primary goals for using online learning platforms.

Acquiring job-ready skills (114) dominates, with certification preparation (31), career switching (26), and staying updated (27) as secondary goals. Few use platforms purely for

exploration (5).

Learning Frequency Patterns: Demonstrates that most learners engage daily (64%, 132 respondents), with weekly learners forming the second largest group (33%, 67 responses). The high daily engagement suggests an audience committed to consistent learning.

Learning Device Distribution: Illustrates device usage for online learning. Laptops lead at 42% (148 responses), with smartphones at 25% (88), tablets at 21% (73), and desktops at 12% (43). This suggests platform optimization should prioritize laptop and mobile experiences.

5. Which devices do you primarily use for learning online?

[More details](#)

Laptop	148
Tablet	73
Desktop	43
Smartphone	88
Other	1

Course Completion Motivators: Explores what helps learners finish courses. Career advancement (148) is the strongest motivator, followed by certification (97) and engaging content (87). Social elements like badges (47) and peer interaction (30) are less influential but still present.

6.

What helps you finish a course?

[More details](#)

الذي يساعدك في إنهاء دورة تدريبية؟

It helps me in my career	148
It's fun or interactive	87
I get a certificate	97
I earn points or badges	47
I can talk with other learners	30
Other	1

Desired Platform Features: Reveals the most wanted features in a new learning platform. Personal learning paths (156), practical coding/real tasks (151), and smart course

suggestions (141) are the clear priorities. Mentorship (103) is also valued, while job-finding assistance (66) is less critical but still significant.

Content Preference Analysis: Shows preferred learning content types. Video lessons dominate (146 responses), followed by quizzes/questions (105). Live classes, downloadable notes, and projects all received moderate interest. This indicates a strong preference for video-based learning with interactive elements.

AI Tool Acceptance: Demonstrates overwhelming openness to AI learning tools with 87% (180 respondents) saying "Yes." Only 4% (8 respondents) rejected AI tools, while 8% (17

respondents) were undecided. This indicates strong market readiness for AI-enhanced learning.

Learning Image Analysis: shows one-time course payments are most popular (33%, 69 responses), followed by freemium models (27%, 55 responses). Monthly subscriptions appeal to 23% (47 users), while completely free options are preferred by 16% (33 users). This suggests flexibility in payment models is important.

Online Platform Pain Points: Reveals nearly identical top complaints: difficulty following content (121 responses) and boring content (120 responses). Technical issues like poor

design/performance (84) and high costs (74) are secondary but significant problems. Limited support/feedback (30) affects fewer users but remains noteworthy.

AI Learning Concerns: Shows data privacy is the primary AI concern at 39% (162 responses), followed by accuracy concerns (29%, 118 responses) and over-automation worries (22%, 92 responses). Only 9% (38 respondents) have no AI concerns, indicating educational platforms must address these issues.

Platform Switch Motivators: Shows what would motivate users to switch to a new platform like TrackIT. Better career help dominates at 45% (92 responses), with practical learning experiences at 26% (54 responses). Less critical but still noteworthy are

personalized experiences (13%), lower pricing (9%), and novel features (7%). Career advancement clearly drives platform adoption decisions.

TrackIT Interest Level: Reveals strong potential adoption, with 86% (178 respondents) willing to try TrackIT if it meets their needs. Only 4% (9 respondents) declined, while 9% (19 respondents) were undecided. This suggests high market receptiveness.

Most Valued Platform Features: Highlights job matching as the most desired feature at 37% (146 responses), with mentorship close behind at 27% (107 responses). Progress tracking (20%, 79 responses) and real projects (15%, 59 responses) are also valued. Career advancement clearly drives feature preferences.

TrackIT Rating Analysis: Shows TrackIT received an impressive 4.71/5 average rating. The vast majority (167 respondents) gave the highest rating (Level 5), with 25 giving Level 4, 11 giving Level 3, none giving Level 2, and just 3 giving Level 1. This demonstrates exceptional user satisfaction.
